

SIH-26182 INVESTIGATION REPORT

Wallet-to-VASP Attribution System · I4C / Ministry of Home Affairs

Generated: 2026-08-29 21:46 UTC

CASE SUMMARY

Field	Value
Traced Wallet	0xd8da6bf26964af9d7eed9e03e53415d37aa96045
Blockchain	ETHEREUM
Transactions Scanned	4264
Hop Depth Searched	3
Wallet Type	Unknown Wallet

RISK ASSESSMENT

Risk Level: **MEDIUM** · Risk Score: **54/100**

Laundering Typologies Detected:

- Structuring / Smurfing

Active Risk Signals: structuring

VASP ATTRIBUTION RESULTS

Attribution identifies which Virtual Asset Service Providers (VASPs) are linked to fund flows from the traced wallet. A 'Fund flow interaction' means a transaction path was observed — it does NOT assert ownership of the wallet by the VASP. 'Attributed deposit/operational wallet' requires substantially stronger structural evidence and is stated only when warranted.

No known-VASP match found within the searched hop depth. Try increasing max_hops or ensure the VASP registry contains addresses this wallet's network touches.

WALLET BEHAVIOURAL FEATURE VECTOR

These features describe the wallet's on-chain behaviour and are the input to the multi-dimensional attribution scorer. They form the foundation for future ML-based ranking (Level 3 of the roadmap).

Feature Group	Feature	Value
Graph	Unique counterparties	91
Graph	Transaction count	200
Graph	Unique senders	72
Graph	Unique receivers	19
Value	Total volume (ETH)	224.1656
Value	Avg tx value (ETH)	1.1208
Value	In/out ratio	0.000

Value	Value concentration	0.714
Temporal	Tx per day (velocity)	1.88
Temporal	Burst score	9.02
Temporal	Recency (days)	4.1
Temporal	Activity span (days)	106.2
Exposure	Mixer exposure	0.000
Exposure	Bridge exposure	0.000
Exposure	VASP exposure	0.011
Structuring	Structuring ratio	0.545
Structuring	Peel chain score	0.0

SAHYOG PORTAL ROUTING RECOMMENDATION

Recommended Action: No VASP identified — manual investigation required

No known exchange was reached within the hop limit. Consider widening the search depth or checking additional chains.

WALLET CLASSIFICATION

Type: Unknown Wallet

Reason: No specific classification matched — likely unhosted personal wallet

DISCLAIMER: This report is generated by an automated prototype (SIH-26182) for investigative lead purposes only. Confidence scores are multi-dimensional heuristics and must be corroborated with formal legal process before any enforcement action. VASP attribution identifies fund flow relationships — it does NOT establish legal ownership unless explicitly stated as 'Attributed deposit/operational wallet' with High evidence quality. Attribution data is based on publicly available blockchain labels and known-address intelligence datasets. This report does not constitute legal evidence.
